Toothache Causes

Toothache occurs when dental pulp (the middle layer of the tooth, containing sensitive nerves and blood vessels) becomes exposed, irritated or inflamed.

This can be caused by a number of factors, including dental decay, a fracture to the tooth, receding gums or certain dental treatments, such as loose filling.

Symptoms

The primary symptom of toothache is pain in your tooth and mouth, however the pain can occur in many various ways:

- Sharp, throbbing, or constant pain
- Tooth pain that only occurs when pressure is applied
- Swelling and painful gums
- A bad taste in the mouth (from an infection in a tooth)
- Fever or headache

Triggers

Biting Down

Other Pressure

Cold Drinks
or Food

Sweet Food

Mouth Ulcer Causes

Mouth ulcers are a common condition. They are painful, round yellow or white sores that can appear as a single ulcer on the inside of the lips, cheeks, gums or on the tongue.

The majority of mouth ulcers are defined as 'minor' and most are caused by trauma to the mouth, for example biting the inside of the cheek or from excessive brushing. Some people suffer from recurrent mouth ulcers. The causes of these are often unknown, but can be triggered by certain factors such as trauma to the mouth, stress and anxiety, hormonal changes or eating and drinking certain foods.

Symptoms

If you have a painful sore inside your mouth check to see if it's an ulcer by looking for these symptoms:

- Mouth ulcers begin as a small bump or red spot inside the mouth
- Sometimes a tingling or burning sensation signals a developing mouth ulcer
- They progress rapidly to clearly defined spots in the mouth
- They are small, but can be painful and can cause irritation
- Mouth ulcers are typically small, however, occasionally one can be very large (2 or more inches) and can take as long as 6 weeks to fully heal

Breathe easy with Sterimar.
The 100% natural sea water
based nasal spray.

FREE FROM STEROIDS | DRUGS | PRESERVATIVES

*GPrX data: UK, non-medicated nasal sprays, from August 2021 – July 2023

THE BENEFITS OF SEA WATER

Sea Water is renowned for having a perfect compatibility with the cells of the body and many therapeutic virtues.

The nasal delivery of a formula made with 100% Natural Sea Water has a number of benefits:

- MOISTURISES THE NASAL MEMBRANE
- DECONGESTS (in the use of a hypertonic formula)
- EASES ELIMINATION OF IMPURITIES (dust, mucus, pollution etc.)

As a result, it helps:

- RELIEVE SYMPTOMS of many nasal conditions
- PREVENT FURTHER DISFUNCTION by keeping the nasal membrane healthy

Sea water also contains essential trace elements (copper, manganese, sulfur, zinc, magnesium, etc) which have specific properties and activate many metabolic processes. They are essential for the growth and balance of nasal mucous cells.

STÉRIMAR™, THE SEA WATER EXPERT

For more than 45 years, Stérimar™ nasal sprays have been helping families breathe free, naturally.

All our products are made with 100% Natural Sea Water sourced from The Bay of Cancale on the Brittany coast in France and manufactured in the UK. The Bay of Cancale is an extremely protected environment, which also benefits from the permanent renewal of the water thanks to the highest tides in Europe. The area is also known to host the largest colony of Bottlenose dolphins in Europe, 400 of them! The outstanding purity of our Sea Water is certified by IFREMER (as class A).

Stérimar™ products are:

- Suitable for pregnant and breastfeeding women
- May be used on its own or alongside medicated products based on the advice of a doctor

STÉRIMAR™
the UK's no.1
GP recommended brand*

SUITABILITY CHECKER

SUPPORT GUIDE

How to utilise VIAGRA CONNECT's new customer tool in your pharmacy

VIAGRA CONNECT (sildenafil 50mg) recently launched an online Suitability Checker to help make it easier for customers to purchase it from the pharmacy. The screening questions will allow men with erection problems (EPs)¹ to check whether VIAGRA CONNECT might be a suitable option for them, before visiting the pharmacy.

HOW CAN THE SUITABILITY CHECKER HELP?

Improved access

Up to 1 in 4 men* in the UK have experienced some degree of EP, but difficulty accessing treatment via conventional primary care services, including GPs, can be a barrier.² The online Suitability Checker informs men whether VIAGRA CONNECT may be a suitable option for them. For these customers, obtaining VIAGRA CONNECT over the counter (OTC) at their local pharmacy may be easier than obtaining a prescription-only product.

Less daunting

Some men may feel uncomfortable, ashamed or embarrassed about their EPs.³ The idea of speaking to a healthcare professional may seem daunting and they may have concerns about the nature of the conversation. Using the Suitability Checker may put their mind at ease about the types of questions involved and allow them to consider their responses away from a healthcare setting. This may encourage them to take action on their EPs.

More private

A concern about lack of privacy in the pharmacy may be off-putting for some men. However, the Suitability Checker can be completed in private, wherever they feel comfortable. A copy of the responses can be shown at the pharmacy counter, thereby subtly communicating their intention to purchase VIAGRA CONNECT without the need to explicitly ask for the product.

More convenient

Customers can complete the Suitability Checker at a time and place that suits them. It may act as an information tool to potentially speed up the pharmacy consultation process, saving time for both the customer and the pharmacist/pharmacy team. The Suitability Checker can also indicate to customers when OTC treatment may not be suitable for them by suggesting that they make a GP appointment. This could enable timely investigation of potential underlying conditions.

Viagra Connect:

- Suitable for men aged 18 years and over with EPs¹
- Increases blood flow to the penis to help men achieve and maintain an erection for long enough to allow satisfactory sexual performance¹⁻⁴
- Considered one of the first-line drug treatments for EPs^{4,5}
- Has been available OTC in UK pharmacies since 2018⁶
- Has helped over 1 million men with EPs**

Sildenafil 50mg, P

* Men reporting difficulty getting or keeping an erection in the past 12 months. Based upon Ipsos Healthcare, December 2022, Viagra Connect: EP in the UK 2022 KPI Tracking Study, in a survey of 3938 men.

** Estimated from reported VIAGRA CONNECT use since launch (Kantar 2019) & UK male population 35+ years

SUITABILITY CHECKER QUESTIONS

The Suitability Checker is an online questionnaire comprising of 7 questions to help your customer determine whether VIAGRA CONNECT may be a suitable option for them. For your reference, the questions they will need to complete are included below:

1. In the last 6 months, have you had a heart attack or a stroke?

Yes

No

Unsure

2. Do you feel very breathless or get chest pain with light to moderate exercise such as walking fast for 20 minutes or climbing 2 flights of stairs?

Yes

No

Unsure

3. Are you taking any of these medicines or drugs?

3.1 Nitrate medicines for chest pain

3.2 Any recreational drugs such as poppers

3.3 Any other regular medication

Yes

No

Unsure

4. Do you have any of the following health conditions?

4.1 Liver or kidney disease

4.2 Blood diseases: leukaemia, sickle cell anaemia, multiple myeloma

4.3 Bleeding issues: haemophilia or stomach ulcers

4.4 A heart problem, uncontrolled high blood pressure, low blood pressure, unstable angina or heart failure

Yes

No

Unsure

5. Do you have Peyronie's disease or any other deformation of the penis?

Yes

No

Unsure

6. Have you ever had loss of vision because of damage to the optic nerve (known as NAION) or have an inherited eye disease (e.g. retinitis pigmentosa)?

Yes

No

Unsure

7. Do you have any allergies or intolerances (e.g. lactose intolerance)?

Yes

No

Unsure

Based on the responses, the following messages will be shown:

If yes is selected to Question 3.3 and/or Question 7:

Thank you. Based on your responses, Viagra Connect may be suitable for you. Please download or take a screen shot of your responses to show the pharmacist. Please also bring along a list of your regular medication and/or allergies with you for the pharmacist to check your suitability.

If yes is selected for any responses other than Questions 3.3 and 7:

Thank you. Based on your responses, Viagra Connect may not be suitable for you. Please speak to your GP.

If no is answered for all of the responses or if unsure is answered for any of the responses:

Thank you. Based on your responses, Viagra Connect may be suitable for you. Please download or take a screen shot of your responses to show the pharmacist.

POTENTIAL OUTCOMES

Based on their answers to the questionnaire, the customer will be informed of one of two possible outcomes.

1: VIAGRA CONNECT may be suitable

The customer is encouraged to take the downloaded answers or a screenshot of their responses to the pharmacy to aid a conversation about EPs. Where applicable, they may also be advised to bring a list of their regular medication or allergies with them.

The Suitability Checker clearly states that the pharmacist may have more questions, but be mindful that the customer may arrive with the expectation that VIAGRA CONNECT will be sold to them. However, completion of the Suitability Checker doesn't mean that the product is definitely going to be supplied and it doesn't mean that it can be purchased without any consultation at all. Talk to your pharmacist about how to best approach these conversations and which process to follow in your pharmacy.

2: VIAGRA CONNECT may not be suitable

The customer is advised to have a conversation with their GP for advice and to discuss next steps. You may see customers in the pharmacy with a copy of their answers to the Suitability Checker.

Considerations for the pharmacist and the pharmacy team

"Can I just sell VIAGRA CONNECT when the customer shows their responses to the Suitability Checker?"

No. The Suitability Checker does not override a healthcare professional's judgement on whether to supply VIAGRA CONNECT, or inform customers that VIAGRA CONNECT is a suitable option for them. Depending on their responses, customers will be directed to either a pharmacist or GP to discuss whether supply would be appropriate. The Suitability Checker can aid this conversation, but the VIAGRA CONNECT Pharmacy Checklist remains available to support the healthcare professional's decision-making process.

of detail as the Pharmacy Checklist.⁷ For example, it only specifically asks the customer whether they are taking nitrates or the recreational drug "poppers". A more extensive list of medicines that may interact with VIAGRA CONNECT can be found in the Pharmacy Checklist or the Essential Information guide for the supply of VIAGRA CONNECT.⁸ These documents are available to support conversations with customers.

"Has the Suitability Checker replaced the Pharmacy Checklist?"

No. The Suitability Checker contains 7 simplified questions, but it does not capture the same level

"Is there other information that I need to share with my customer when VIAGRA CONNECT is supplied?"

Yes. You should encourage them to read the leaflet inside the pack to ensure that they know how to use VIAGRA CONNECT and when they should stop taking it to seek immediate medical advice. This level of information is not provided in the Suitability Checker. It is also important to advise customers to make an appointment with their GP within 6 months of taking VIAGRA CONNECT for the first time.

ADDRESSING THE CAUSES OF EPS

Multiple underlying causes can contribute to EPs.⁹ Up to 80% of cases may be linked to an organic cause, the most common of which are those that affect blood supply.^{9,10} These EPs are usually associated with a gradual onset of symptoms,⁹ which could mean a delay in men seeking treatment. As a result, early detection (and treatment) of the primary cause may also be delayed. Remember to encourage men to have their blood pressure and cholesterol checked regularly as this may help to identify these risk factors early.

Availability of the Suitability Checker may motivate more men to take the initiative to investigate whether VIAGRA CONNECT may be suitable for them. But taking medication is only one part of the recommended approach to manage EPs; this should be combined with lifestyle changes.⁴

Promoting a healthy lifestyle

Men are less likely to lead healthy lifestyles¹¹ and any additional advice that you can give to support healthy choices may also help with their EPs.¹²

Eat well

Eating a balanced, healthy diet can reduce the risk of heart disease and diabetes, both of which can lead to EPs. Men who eat lots of wholegrains, fruits and vegetables, and avoid processed foods and too much red meat, have fewer EPs.

Maintain a healthy weight

Obesity is associated with a range of health issues that may cause EPs. Men within a healthy body mass index (BMI) range have less likelihood of EPs.

Keep active

Regular exercise improves overall health and helps prevent physical issues, e.g. obesity, that can lead to EPs.

Limit alcohol

Too many drinks can affect sexual performance in the short term, but alcohol can also lead to long-term EPs.

Give up smoking

Smoking increases the risk of EPs. Non-smokers and ex-smokers are less likely to suffer from EPs than smokers.

Sleep well

Insufficient and disrupted sleep may increase the chances of having EPs. Making small changes, e.g. implementing good sleep hygiene, can help to encourage better sleep.

Reduce stress and anxiety

Stress and anxiety can lead to a variety of physical symptoms, including EPs. Meditation or other mindfulness techniques may help to improve mood. However, if you are concerned about someone's mental wellbeing, encourage them to seek help.

Name of product: VIAGRA CONNECT® 50 mg Film-coated Tablets Active ingredient: Sildenafil

Product licence number: PL 50622/0063 **Name and address of the product licence holder:** Upjohn UK Limited, Ramsgate Road, Sandwich, Kent, CT13 9NJ, UK **Supply classification:** P **Indications:** For erectile dysfunction in adult men. **Side Effects:** The safety profile of VIAGRA is based on > 9,000 patients in > 70 double-blind placebo controlled clinical studies. The most commonly reported adverse reactions in clinical studies among sildenafil treated patients were headache, flushing, dyspepsia, nasal congestion, dizziness, nausea, hot flush, visual disturbance, cyanopsia and vision blurred. Adverse reactions from post marketing surveillance has been gathered covering an estimated period >10 years. Because not all adverse reactions are reported to the Marketing Authorisation Holder and included in the safety database, the frequencies of these reactions cannot be reliably determined. Very Common ($\geq 1/10$): Headache. Common ($\geq 1/100$ and $<1/10$): Dizziness, Visual colour distortions (Chloropsia, Chromatopsia, Cyanopsia, Erythropsia and Xanthopsia), Visual disturbance, Vision blurred, Flushing, Hot flush, Nasal congestion, Nausea, Dyspepsia. Uncommon ($\geq 1/1,000$ and $<1/100$): Rhinitis, Hypersensitivity; Somnolence; Hypoaesthesia, Lacrimation disorders (Dry eye, Lacrimal disorder and Lacrimation increased), Eye pain, Photophobia, Photopsia, Ocular hyperaemia, Visual brightness, Conjunctivitis, Vertigo, Tinnitus, Tachycardia, Palpitations, Hypertension, Hypotension, Epistaxis, Sinus congestion, Gastro Oesophagael reflux disease, Vomiting, Abdominal pain upper, Dry mouth, Rash, Myalgia, Pain in extremity, Haematuria, Chest pain, Fatigue, Feeling hot, Heart rate increased. Rare ($\geq 1/10,000$ and $<1/1,000$): Cerebrovascular accident, Transient ischaemic attack, Seizure, Seizure recurrence, Syncope, Non-arteritic anterior ischaemic optic neuropathy (NAION), Retinal vascular occlusion, Retinal haemorrhage, Arteriosclerotic retinopathy, Retinal disorder, Glaucoma, Visual field defect, Diplopia, Visual acuity reduced, Myopia, Asthenopia, Vitreous floaters, Iris disorder, Mydriasis, Halo vision, Eye oedema, Eye swelling, Eye disorder, Conjunctival hyperaemia, Eye irritation, Abnormal sensation in eye, Eyelid oedema, Scleral discoloration, Deafness, Sudden cardiac death, Myocardial infarction, Ventricular arrhythmia, Atrial fibrillation, Unstable angina, Throat tightness, Nasal oedema, Nasal dryness, Hypoaesthesia oral, Stevens-Johnson Syndrome (SJS), Toxic Epidermal Necrolysis (TEN), Penile haemorrhage, Priapism, Haemospermia, Erection increased, Irritability **Precautions:** Erectile dysfunction can be associated with a number of contributing conditions, e.g. hypertension, diabetes mellitus, hypercholesterolaemia or cardiovascular disease. As a result, all men with erectile dysfunction should be advised to consult their doctor within 6 months for a clinical review of potential underlying conditions and risk factors associated with erectile dysfunction (ED). If symptoms of ED have not improved after taking VIAGRA CONNECT on several consecutive occasions, or if their erectile dysfunction worsens, the patient should be advised to consult their doctor. Cardiovascular risk factors: Since there is a degree of cardiac risk associated with sexual activity, the cardiovascular status of men should be considered prior to initiation of therapy. Agents for the treatment of erectile dysfunction, including sildenafil, are not recommended to be used by those men who with light or moderate physical activity, such as walking briskly for 20 minutes or climbing 2 flights of stairs, feel very breathless or experience chest pain. The following patients are considered at low cardiovascular risk from sexual activity: patients who have been successfully revascularised (e.g. via coronary artery bypass grafting, stenting, or angioplasty), patients with asymptomatic controlled hypertension, and those with mild valvular disease. These patients may be suitable for treatment but should consult a doctor before resuming sexual activity. Patients previously diagnosed with the following must be advised to consult with their doctor before resuming sexual activity: uncontrolled hypertension, moderate to severe valvular disease, left ventricular dysfunction, hypertrophic obstructive and other cardiomyopathies, or significant arrhythmias. Sildenafil has vasodilator properties, resulting in mild and transient decreases in blood pressure. Patients with increased susceptibility to vasodilators include those with left ventricular outflow obstruction (e.g. aortic stenosis), or those with the rare syndrome of multiple system atrophy manifesting as severely impaired autonomic control of blood pressure. Men with these conditions must not use the product without consulting a doctor. Sildenafil potentiates the hypotensive effect of nitrates (see **Contra-indications**). Serious cardiovascular events, including myocardial infarction, unstable angina, sudden cardiac death, ventricular arrhythmia, cerebrovascular haemorrhage, transient ischaemic attack, hypertension and hypotension have been reported post-marketing in temporal association with the use of sildenafil. Most, but not all, of these patients had pre-existing cardiovascular risk factors. Many events were reported to occur during or shortly after sexual intercourse and a few were reported to occur shortly after the use of sildenafil without sexual activity. It is not possible to determine whether these events are related directly to these factors or to other factors. Priapism: Patients who have conditions which may predispose them to priapism (such as sickle cell anaemia, multiple myeloma or leukaemia), should consult a doctor before using agents for the treatment of erectile dysfunction, including sildenafil. Prolonged erections and priapism have been occasionally reported with sildenafil in post-marketing experience. In the event of an erection that persists longer than 4 hours, the patient should seek immediate medical assistance. If priapism is not treated immediately, penile tissue damage and permanent loss of potency could result. Concomitant use with other treatments for erectile dysfunction: The safety and efficacy of combinations of sildenafil with other treatments for erectile dysfunction have not been studied. Therefore the use of such combinations is not recommended. Effects on vision: Cases of visual defects have been reported spontaneously in connection with the intake of sildenafil and other PDE5 inhibitors (see **Side Effects**). Cases of non-arteritic anterior ischaemic optic neuropathy, a rare condition, have been reported spontaneously and in an observational study in connection with the intake of sildenafil and other PDE5 inhibitors (see **Side Effects**). Patients should be advised that in the event of any sudden visual defect, they should stop taking VIAGRA CONNECT and consult a physician immediately (see **Contra-indications**). Concomitant use with CYP3A4 inhibitors: Pharmacokinetic analysis of clinical trial data indicated a reduction in sildenafil clearance when co-administered with CYP3A4 inhibitors (such as ketoconazole, itraconazole, erythromycin, cimetidine). Although, no increased incidence of adverse events was observed in these patients, they should be advised to consult a doctor before taking VIAGRA CONNECT as a 25 mg tablet may be more suitable for them (see **Precautions**). Concomitant use with alpha-blockers:

Caution is advised when sildenafil is administered to patients taking an alpha-blocker, as the co-administration may lead to symptomatic hypotension in a few susceptible individuals (see **Precautions**). This is most likely to occur within 4 hours post sildenafil dosing. In order to minimise the potential for developing postural hypotension, patients should be hemodynamically stable on alpha-blocker therapy prior to initiating sildenafil treatment. Thus, patients taking alpha blockers should be advised to consult their doctor before taking VIAGRA CONNECT as a 25 mg tablet may be more suitable for them. Treatment should be stopped if symptoms of postural hypotension occur, and patients should seek advice from their doctor on what to do. Effect on bleeding: Studies with human platelets indicate that sildenafil potentiates the antiaggregatory effect of sodium nitroprusside in vitro. There is no safety information on the administration of sildenafil to patients with bleeding disorders or active peptic ulceration. Therefore the use of sildenafil is not recommended in those patients with history of bleeding disorders or active peptic ulceration, and should only be administered after consultation with a doctor. Hepatic impairment: Patients with hepatic impairment must be advised to consult their doctor before taking VIAGRA CONNECT, since a 25 mg tablet may be more suitable for them (see **Dosage and Method of use**). Renal impairment: Patients with severe renal impairment (creatinine clearance <30 mL/min), must be advised to consult their doctor before taking VIAGRA CONNECT, since a 25 mg tablet may be more suitable for them (see **Dosage and Method of use**). Lactose: The film coating of the tablet contains lactose. VIAGRA CONNECT should not be administered to men with rare hereditary problems of galactose intolerance, total lactase deficiency or glucose-galactose malabsorption. Sodium: This medicinal product contains less than 1 mmol sodium (23 mg) per tablet. Patients on low sodium diets can be informed that this medicinal product is essentially 'sodium-free'. Use with alcohol Drinking excessive alcohol can temporarily reduce a man's ability to get an erection. Men should be advised not to drink large amounts of alcohol before sexual activity. **Contra-indications:** Hypersensitivity to the active substance or to any of the excipients listed in section 6.1. Consistent with its known effects on the nitric oxide/cyclic guanosine monophosphate (cGMP) pathway, sildenafil was shown to potentiate the hypotensive effects of nitrates, and its co-administration with nitric oxide donors (such as amyl nitrite) or nitrates in any form is therefore contraindicated. Co-administration of VIAGRA CONNECT with ritonavir (a highly potent P450 enzyme inhibitor) is contraindicated (see **Precautions**). The co-administration of phosphodiesterase type 5 (PDE5) inhibitors, including sildenafil, with guanylate cyclase stimulators, such as riociguat, is contraindicated as it may potentially lead to symptomatic hypotension (see **Precautions**). Agents for the treatment of erectile dysfunction, including sildenafil, should not be used by those men for whom sexual activity may be inadvisable, and these patients should be referred to their doctor. This includes patients with severe cardiovascular disorders such as a recent (6 months) acute myocardial infarction (AMI) or stroke, unstable angina or severe cardiac failure. Sildenafil should not be used in patients with severe hepatic impairment, hypotension (blood pressure < 90/50 mmHg) and known hereditary degenerative retinal disorders such as retinitis pigmentosa (a minority of these patients have genetic disorders of retinal phosphodiesterases). This is because the safety of sildenafil has not been studied in these sub-groups of patients, and its use is therefore contraindicated. Sildenafil is contraindicated in patients who have loss of vision in one eye because of non-arteritic anterior ischaemic optic neuropathy (NAION), regardless of whether this episode was in connection or not with previous PDE5 inhibitor exposure. VIAGRA CONNECT should not be used in patients with anatomical deformation of the penis (such as angulation, cavernosal fibrosis or Peyronie's disease). VIAGRA CONNECT is not indicated for use by women. The product is not intended for men without erectile dysfunction. This product is not intended for men under 18 years of age. **Dosage and Method of use:** For Oral Use: Adults: The recommended dose is one 50 mg tablet taken with water approximately one hour before sexual activity. The maximum recommended dosing frequency is once per day. If VIAGRA CONNECT is taken with food, the onset of activity may be delayed compared to the fasted state. Patients should be advised that they may need to take VIAGRA CONNECT a number of times on different occasions (a maximum of one 50 mg tablet per day), before they can achieve a penile erection satisfactory for sexual activity. If after several attempts on different dosing occasions patients are still not able to achieve a penile erection sufficient for satisfactory sexual activity, they should be advised to consult a doctor. Elderly: Dosage adjustments are not required in elderly patients (≥ 65 years old). Renal Impairment: No dosage adjustments are required for patients with mild to moderate renal impairment. However, since sildenafil clearance is reduced in individuals with severe renal impairment (creatinine clearance <30ml/min), individuals previously diagnosed with severe renal impairment must be advised to consult their doctor before taking VIAGRA CONNECT, since a 25 mg tablet may be more suitable for them (see **Precautions**). Hepatic Impairment: Sildenafil clearance is reduced in individuals with hepatic impairment (e.g. cirrhosis). Individuals previously diagnosed with mild to moderate hepatic impairment must be advised to consult their doctor before taking VIAGRA CONNECT, since a 25 mg tablet may be more suitable for them (see **Precautions**). The safety of sildenafil has not been studied in patients with severe hepatic impairment, and its use is therefore contraindicated (see **Contra-indications**). Paediatric population: VIAGRA CONNECT is not indicated for individuals below 18 years of age. Use in patients taking other medicinal products: Pharmacokinetic analysis of clinical trial data indicated a reduction in sildenafil clearance when co-administered with CYP3A4 inhibitors (such as ritonavir, ketoconazole, itraconazole, erythromycin, cimetidine). With the exception of ritonavir, for which co-administration with sildenafil is contraindicated (see **Contra-indications**), individuals receiving concomitant treatment with CYP3A4 inhibitors must be advised to consult their doctor before taking VIAGRA CONNECT, since a 25 mg tablet may be more suitable for them (see **Precautions**). In order to minimise the potential of developing postural hypotension in patients receiving alpha blocker treatment (e.g. alfuzosin, doxazosin or tamsulosin), patients should be stabilised on alpha blocker therapy prior to initiating sildenafil treatment. Thus, patients taking alpha blockers must be advised to consult their doctor before taking VIAGRA CONNECT since a 25 mg tablet may be more suitable for them (see **Precautions**). Addition of a single dose of sildenafil to sacubitril/valsartan at steady state in patients with hypertension was associated with a significantly greater blood pressure reduction compared to administration of sacubitril/valsartan alone. Therefore, caution should be exercised when sildenafil is initiated in patients treated with sacubitril/valsartan. **C+D Trade Price (exc VAT)** 2 pack £8.82, 4 pack £16.17 and 8 pack £28.39 **Date of revision:** 04/2023

Please continue to report suspected adverse drug reactions with any medicine or vaccine to the MHRA through the Yellow Card Scheme. It is easiest and quickest to report adverse drug reactions online via the Yellow Card Website: <https://yellowcard.mhra.gov.uk/> or search for MHRA Yellow Card in the Google Play or Apple App Store. Alternatively, you can report via some clinical IT systems (EMIS/ SystemOne/Vision/MiDatabank) or by calling the Commission on Human Medicines (CHM), free phone line: 0800-731-6789. Adverse reactions/events should also be reported to MAH at e-mail address: pv.uk@viatris.com.

The SmPC for this product, including adverse reactions, precautions, contra-indications, and method of use can be found at: <http://www.mhra.gov.uk/Safetyinformation/Medicinesinformation/SPCandPILs/index.htm> and from Viatris Medical Information, Building 4, Trident Place, Hatfield Business Park, Mosquito Way, Hatfield, Hertfordshire, AL10 9UL, phone no. 01707 853000, Email: info.uk@viatris.com

Love your heart

The Cardioace® range has been developed by Vitabiotics' nutritional experts based on extensive research on the role of nutrients in normal heart health.

Cardioace® Original provides comprehensive daily nutritional support including thiamin which contributes to normal **heart function** plus vitamins B6, B12 and folate which contribute to normal **homocysteine metabolism**.

Cardioace® Plus provides the benefits of the Original formula plus even greater nutritional support with 1.3g of Plant Sterols scientifically proven to help maintain **normal blood cholesterol levels**¹, as well as Omega-3 fish oils.

Cardioace® Max provides all the benefits of Cardioace® Plus, with an additional capsule of premium quality Red Krill Oil, a superior, easily absorbed source of Omega-3 DHA and EPA fatty acids, which contribute to normal **heart function**².
